

Introducing the Microsoft Small Business Server

PAQ IT Solutions would like to introduce you to a product we highly recommend. We have tremendous experience implementing all the benefits of Microsoft Small Business Server. This is a relatively inexpensive product that will transform & streamline the running of the office.

Some of the many features that Microsoft Small Business Server provides...

- Security – access to files kept on the server can be controlled. Each user or department can be given appropriate rights in order that users only have access to data needed to do their job.
- Central Instant Email. (Internal & External)
- Easy access to your calendar, contacts and email from a number of mobile phone devices available on the market such as the Nokia eSeries or any phone using a windows mobile operating system (Palm, XDA, etc.)
- Central Data Storage & Scheduled Daily Backup “Get your employees working together” Whenever a team member updates a document and saves it to the server, the new information is available instantly to the entire team. And, by creating a customisable internal website or intranet, your employees can share entire document libraries, announcements, events and links and even work together in unison on important projects.
- Central Printing to all printers in the office.
- Shared Contacts available to all departments and all users.
- Shared Calendars – can be used to centrally manage key personnel calendars.
- Faxing directly from each user’s computer.
- Remote Access to Files in the office from ANY location (Globally). Give your employees the freedom to work from almost anywhere. With Windows Small Business Server 2003, your team can securely access the same network resources they would have if they were sitting at their desks – even when they’re not. Remote Access to your Email from anywhere without having to use your laptop.
- Email automatically pushed out to your Blackberry/suitable mobile phone.
- Room to grow – Capacity can be increased to over 75 users as the company grows.
- Remote Support Access also gives PaqIT Solutions the ability to ‘log on’ to your network and offer prompt support where & when it is required.
